

Facility Industry Type		Facility Emissions		Emissions by State		About the Data
<p>when “facility industry type” is clicked, there will be a dropdown that will show sunburst graph of facilities’ industry type; user can filter by state with dropdown options</p> <p>this will be the default window that appears when the user comes to the dashboard</p>		<h1>GHG Facility Emissions</h1> <div>[dropdown]</div> <div>select state: _____ (default will be VA)</div>				<p>a text overview/explanation of whatever graph is selected</p> <p>for ‘facility industry type’: also when user hovers over (or clicks on) a facility name in the outer layer, there will be text here that will change for each facility will give info about:</p> <ul style="list-style-type: none"> industry type facility name city & state facility type total emissions <p>for ‘facility emissions’: when user hovers over (or clicks on) a bar in the graph, there will be text here that will change for each facility in the bar graph(s), giving the following information:</p> <ul style="list-style-type: none"> facility name city & state industry type total emissions <p>for ‘emissions by state’: when user hovers over or clicks on a state on the bubble map, there will be text here that will change for each bubble clicked, giving the following information:</p> <ul style="list-style-type: none"> facility name city & state industry type total emissions <ul style="list-style-type: none"> also broken down to molecule-specific emissions
<p>sunburst graph will show industry type in center & then by city (since already filtering by state with dropdown options)</p> <p>then will go into the facility names as the outer layer</p>		<p>plus legend</p>				
						

GHG Facility Emissions

[radio button]

select emissions type here:

- o CO2

- o CH₄

- o SF6

- o **N2O**

o total emissions

when “emission by state” is clicked, a bubble map of emissions in the contiguous USA will show, with radio buttons to give a bubble map by the specific molecule or by total emissions (default will be total emissions)

a text overview/explanation of whatever graph is selected

for 'facility industry type': also when user hovers over (or clicks on) a facility name in the outer layer, there will be text here that will change for each facility will give info about:

- industry type
- facility name
- city & state
- facility type
- total emissions

for “facility emissions”: when user hovers over (or clicks on) a bar in the graph, there will be text here that will change for each facility in the bar graph(s), giving the following information:

- facility name
- city & state
- industry type
- total emissions

for 'emissions by state': when user hovers over or clicks on a state on the bubble map, there will be text here that will change for each bubble clicked, giving the following information:

- facility name
- city & state
- industry type
- total emissions
 - also broken down to molecule-specific emissions

bubble map will have bubble size by the total emissions of each facility in that state
